Your Horses' Teeth Can't Be Repaired

When your horse's teeth go bad he can't chew his food properly—so he bolts it. The oats slip through the teeth with the hulls unbroken, and the corn is not sufficiently ground. The digestive juices cannot act on the grains, and they pass through the body undigested and wasted. 15% of the oats fed is often lost in this way.

Feed your horses and mules Tuxedo Chop—the balanced ration. The oats are rolled, the corn crushed. It contains just those food elements which the horse requires, in the most easily digested and assimilated form.

Stop waste and keep your horses healthy by feeding Tuxedo chop. The Tuxedo Primer tells how. Let us send you a copy.
